Mon – Fri 8 am - 5 pm (PST)

Sat & Sun 10 am - 4 pm (Jan 15-May 15)

The European Chafer Beetle is here stay, much to the joy of the birds and mammals that excavate your front lawn looking for their larvae. By replacing thatch-style lawn with other types of plants, we remove the habitat for the beetle to begin with.

This simple switch can result in healthier soil, fewer weeds, and a richer biodiversity in your neighbourhood.

GROWING LAWN SOLUTIONS

Timing: Follow the instructions for each product type. More information is available on our website. Try to avoid planting during prolonged hot weather. Over-seeding existing lawn may not work, since the seeds need to be in direct contact with soil. We recommend planting these lawn alternatives into freshly prepared top soil.

Starting: Because lawn spaces tend to be large, we recommend erring on the side of caution. It's a good idea to withhold 15-20% of seeds for filling in any bald areas later. All new plantings should be kept damp.

Growing: Establishing a "Lawn Solution" lawn may take more than one season. Mow and water carefully, according to instructions for each product.

Micro-Clover, Pelleted LS801

Micro-Clover, Raw LS802

- Great lawn replacement
- Naturally fixes nitrogen
- Improves soil fertility
- Tough enough for kids & pets
- Can be mixed with lawn seeds
- Stays greener longer into summer

Chafer Beetle Resistant Lawn LS901

- 95% Tall Fescue, 5% Micro-clover
- Stays greener longer in summer
- Stays green through winter
- Grows in full sun to partial shade
- Tough enough for kids & pets
- Hardy to Zone 4
- Does not attract chafer beetles

Easy Care Groundcover LS902

- Low growing, low maintenance blend
- Fast coverage for erosion control
- Hardy to Zone 4
- Can handle light foot traffic
- Supports biodiversity
- Excellent lawn replacement

Tall Fescue, Turf Type LS800

- Standard variety for turf fields
- Drought resistant
- Hardy to Zone 4
- Tough enough for kids & pets
- Stays green through winter
- Does not attract chafer beetles
